## Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Original) A method of adjusting the optical thickness of an optical component made from a material transparent to light to be used, comprising;

adding one of layers of a material which is the same as the material of said optical component, and of a material which has an index of refraction close to the index of refraction of said material of said optical component, to a surface of said optical component by at least one of vapor deposition and vapor growth, so that optical thickness is increased.

- 2. (Canceled)
- 3. (Canceled)
- 4. (Canceled)
- 5. (Original) An optical component whose optical thickness has been adjusted by the thickness adjustment method of Claim 1.
  - 6. (Canceled)
  - 7. (Canceled)
  - 8. (Canceled)
